

EU REACH

November 17, 2025 | Written by GreenSoft Technology, Inc.

One Substance Added to EU REACH SVHC List

EU REACH SVHC List now contains 251 Entries

On November 5, the **European Chemicals Agency (ECHA)** announced the addition of **1 substance** to the **EU REACH** Substances of Very High Concern (SVHC) Candidate List.

This action brings the **EU REACH SVHC Candidate List** to 251 entries. However, some entries are groups of chemicals, so the overall number of impacted chemicals is higher.

The inclusion of substances in the **EU REACH** SVHC List brings immediate obligations for affected companies using the substances in their products above the stated threshold, including customer notification requirements and notifying **ECHA** through submissions to the **SCIP Database**. **GreenSoft Technology** can help with this process as part of our **Data Services**.

The **1 new substance**, as well as its reason for inclusion and common uses, is listed in the table below:

Substance Name	EC Number	CAS Number	Reason for Proposing	Examples of use(s) in Electronics
1,1'-(ethane-1,2-diyl)bis[pentabromobenzene] (DBDPE)	284-366-9	84852-53-9	Very persistent and very bioaccumulative, vPvB (Article 57e)	Flame retardant

ECHA's announcement of the additions can be found [here](#). The full SVHC-251 list can be found [here](#). The last prior addition to the SVHC list was SVHC-250 in **June 2025**.

GreenSoft can help with EU REACH compliance

The **EU REACH** SVHC List is typically updated twice per year, resulting in affected companies needing to re-evaluate their product compliance and possibly re-collect substance data from their suppliers.

GreenSoft Technology helps manage this process for companies, including coverage for the **SCIP Database**, by performing data collection, data validation, substance calculations and report generation as part of our **EU REACH data services**.
